## H-TX3B-RF

Key-chain RF remote control with 3 buttons

#### Technical data

Power supply	3 V battery CR2032
Frequency	868.3 MHz
Ingress protection IP	IP20

#### Description

The H-TX3B-RF is a 3-button remote control with radiofrequency transmitter.

It is intended to be used to control the ONLY alarm and/or command any device or group of devices of an ONLY automation system.

The messages sent by this command have an encrypted part that can only be decoded by ONLY alarm centrals. Because of that, the command must be "added" to the central. The encrypted part is used exclusively by the ONLY alarm. The remote control can also be used for automation control without encrypted messages.

#### Applications

Arm and disarm the alarm ONLY.

Command of lights, blinds and other outputs.

#### Installation

Key-chain

#### Features

RF remote control with 3 buttons

RF transmitter

Battery supply, 2 years in normal operation

LED indication when transmitting

Left button: ON / Disarm

Right button: OFF / Arm

Centre button: toggle

55mm  
14mm  
44mm

#### Note:

The centre button, when pressed for 5 seconds, sends an emergency signal. If the H-TX3B-RF was installed in the CENTRALSEC, this command will generate an emergency call to the telephone number stored at memory number 6.

Subject to change without notice
